Open Feedback

What worked best for you in the plugin

5 responses

everything is easy and organsied and where you expect it to be if you are familiar with tailwind and css

colours

The auto alignment worked super well, and setting the sizing and colours worked as I expected. I appreciated that it mentioned which component was selected, and that I could get the code for it automatically generated for use after the design had been finalised in a project.

Ease of creating flex layouts

Tutorial

What was the most frustrating part of the experience?

5 responses

Previous text remaining in the search bar, even if you are in different areas. Also boxes get stuck not allowing you to scroll down, other than that all good

layout

There is a big list of features in typography, that if you were not to use the search feature could get tedious to look through if someone were only concerned with one of the categories - also would cause issues with screen readers having to read each category each time if what they searched for happened to be included in multiple categories

A bug meaning I had to contract + re-expand the menu when changing tabs - not a big issue though

not able to scroll down to certain settings. Not able to follow tutorial. Selecting different / incorrect options.

What specific improvement would most help you complete tasks faster?

5 responses

Fixing the textbox issue

THE SEARCH BAR NEEDS TO DELETE THE CONTENT

Add a filter to typography that allows users to search for specific typography features rather than have all available. Also maybe change the label to "Text Options" or "Text Properties", typography is the correct term but not a commonly used word so missed what it was about on first look.

Allowing me to search for tailwind classnames directly, and press enter to add automatically

UI, Sequencing of steps.

Any additional comments?

5 responses

super cool matty,,,, good job :)

NO

Setup was easy, and works straight away, no frustrations with configuring things. From my personal experience, people with colour blindness should be able to navigate the plugin with no issues.

I have spoken to Matty about additional improvements/suggestions

nope
